ABSTRACT

This study reports on salaries paid the full-time professional staff of public school systems. Data on the numbers of men and women in all major professional areas (including teachers), other instructional staff, and central office personnel are given, as well as salary information for most instructional positions. Salary data for central office personnel have been excluded as a cost effective measure. National estimates of mean and median salaries; and salary distributions for teachers, principals, assistant principals, counselors, librarians, school nurses, and other members of the instructional staff are shown in summary tabulations. In addition, system-by-system listings of reporting systems with enrollments of 25,000 or more are included. Salary data covering all of the approximately 16,425 school systems operating in 1972-73 are incorporated in the survey. Related documents are ED 056 379 and ED 056 398. (Author)

FOREWORD

THIS REPORT, presented in one volume, is the 26th Biennial Salary and Staff Survey made by NEA Research in the continuous and concentrated effort of the National Education Association to improve teacher salaries.

The data are presented in national summary form for the various categories of reporting systems grouped by enrollment. Data for individual systems with enrollments of 25,000 or more are also shown for instructional staff positions.

The number of full-time professional employees in both instructional staff and central-office positions are shown by sex. Salary data are shown in detail for all instructional staff positions by enrollment grouping, and in summary form by sex.

The 1972-73 Biennial Salary and Staff Survey was made under the direction of Gertrude N. Stieber with the assistance of the Statistics Section of NEA Research.

The Association is grateful for the help given by administrators of cooperating school systems who provided the mass of detailed information necessary for this study. Special thanks are due the State Departments of Education of Iowa, Mississippi, and New York which supplied data for most of the school systems of these states included in the study.

W. Jack Tennant
Associate Director, NEA Research

INTRODUCTION

This study is the 26th in a continuing series of comprehensive biennial reports on salaries paid the full-time professional staff of public school systems. Data on numbers of men and women in all major professional areas, including teachers, other instructional staff, and central-office personnel are given as well as salary information for most instructional staff positions. Salary data for central-office personnel have been excluded from the 1972-73 survey in order to reduce the cost of producing the survey.

National estimates of mean and median salaries, and salary distributions for teachers, principals, assistant principals, counselors, librarians, school nurses, and other members of the instructional staff are shown in summary tabulations. In addition, system-by-system listings of reporting systems with enrollments of 25,000 or more are included.

Scope of Study

Salary data covering all of the approximately 16,425 school systems operating in 1972-73 are incorporated in this biennial salary survey. A comprehensive questionnaire was sent to each of the 187 systems with enrollments of 25,000 or more. Usable information was received from 165, or 88 percent of this group. A representative sampling was made of the approximately 16,238 systems with enrollments of less than 25,000. While the response rate from these systems was only 72 percent, it is believed that it is adequate for a representative study.

Salaries paid teachers and other members of the instructional staff were obtained on the basis of specified salary intervals, and means and medians were prepared from the grouped salary distributions.

I. NUMBER OF PUBLIC-SCHOOL EMPLOYEES

Table 1 shows, among other things, that the 187 systems with enrollments of 25,000 or more, accounted for only 1.1 percent of the total operating public school systems in 1972-73, but that these districts employed 27.1 percent of all full-time teachers. At the other extreme, the estimated 4,731 operating districts with enrollments of under 300 each, accounted for 28.8 percent of all operating systems, but employed only 1.8 percent of all teachers.

Similar percentage distributions by size of school system are shown in Table 1 for elementary-school principals, superintendents, and other professional staff positions.

The concentration of principals at the elementary-school level follows fairly closely the distribution of teachers. On the other hand, only 12.9 percent of the senior high-school principals are employed in systems with enrollments of 25,000 or more; in this group of districts high schools tend to be very large, and one principal may have many teachers reporting to him.

Table 1 also shows that the concentration of local-district superintendents is greatest in Group C, which accounts for 60.2 percent of all superintendents. This is understandable since 8,324, or 50.7 percent, of all operating systems are in this enrollment group. Only 1.4 percent of all superintendents are working in the large Group A districts.

Even though 28.8 percent of all operating systems are in Group D (enrollment under 300), only 14.4 percent of all superintendents are employed by this group of systems. Many of these systems are administered by a county or intermediate superintendent even though they are classified as separate operating school systems.

Only a few central-office administrators (other than the superintendent) are found in the smallest school systems. This is understandable since the administrative functions in these systems usually are performed by the superintendent with no professional assistance.

From this study it was estimated that a total of 2,110,368 full-time teachers were employed in public school systems in the United States during 1972-73.[1]

There were an estimated 48,196 elementary-school supervising and teaching principals, 9,374 junior high-school principals, and 15,827 senior high-school principals. It was further estimated that there were 6,483 elementary-school assistant principals, 7,817 junior high-school assistant principals, and 13,289 senior high-school assistant principals.

Among other professional employees assigned to individual schools, it was estimated that there were 49,770 full-time counselors in all operating systems. Full-time school librarians numbered 40,540.

An estimated total of 17,074 school nurses were employed by public-school systems in the United States in the same year. This does not include county or city public health nurses who work in public schools in many county-wide districts.

Number of Professional Employees Classified by Sex

Of the estimated 2,110,368 full-time teachers in 1972-73, women accounted for 1,401,284 or 66.4 percent. However, of the 73,397 supervising principals, only 9,940, or 13.5 percent, were women. Almost the same ratio of men to women was found for assistant principals. Only 19.6 percent of the estimated number of elementary-school principals and only 1.4 percent of the senior high-school principals were women. (Table 2)

Counselors are about evenly divided between men and women with 53.0 percent and 47.0 percent, respectively. As would be expected, 98.6 percent of all school nurses were women, and 91.8 percent of all school librarians were women.

---

[1] This compares with an estimate of 2,100,302 teachers made in December 1972. See: National Education Association—Research. *Estimates of School Statistics, 1972-73.* Research Report 1972-R12. Washington, D.C.: the Association, 1973.

For all other instructional staff positions, including psychologists, heads of departments, social workers, and visiting teachers, men accounted for 49.9 percent of the total and women for 50.1 percent.

For the total instructional staff, comprising teachers, principals, and other full-time professional positions in individual schools, 843,442, or 35.9 percent, of the estimated 2,352,429 persons, were men, and 1,508,987, or 64.1 percent, were women.

Of the total estimated 67,715 central-office administrators in 1972-73, men accounted for 50,440, or 74.4 percent, and 25.6 percent were women. Many of the women were in supervisory positions in subject-matter and pupil personnel areas and also served as directors of elementary education.

Of the central-office categories shown in Table 2, men accounted for 99.9 percent of all superintendents.

For the total estimated full-time professional staff of all schools, 893,882, or 37.2 percent, were men, and 1,526,262, or 62.8 percent, were women. Women dominate the professional staff of public schools because of the preponderance of women teachers, nurses, and librarians. These three groups accounted for 1,455,335, or 95.4 percent, of all professional women employed in public-school systems in 1972-73.

Men far exceed women in the authority positions such as principals, superintendents, deputy, associate and assistant superintendents, and in other central-office administrative areas. Of the total 163,364 in this group in 1972-73, only 30,656, or 18.8 percent were women.

A comparison of the number of men and women in full-time professional positions in public-school systems for the school years 1970-71 and 1972-73 is shown in Table 3. For practically every group shown, the percentage of women has decreased during the two-year period. The amounts of decrease are not large but appear to be consistent for both instructional staff and for central-office positions.

For example, the percent of women teachers decreased from 67.2 to 66.4 percent; the percent of women principals decreased from 15.3 to 13.5 percent. The over-all decrease in the percent of women in central-office positions was very slight—from 25.9 to 25.6 percent. For the total full-time professional staff, the decrease was 1.1 percent—from 63.9 to 62.8.

[a] Includes department heads, social workers, visiting teachers, psychologists, and psychometrists.

[b] Includes central-office administrators for General Administration, Finance and School Plant, Pupil Personnel Services, Instruction administration and Special Subject areas.

II. NATIONAL ESTIMATES OF SALARIES PAID MEMBERS OF THE INSTRUCTIONAL STAFF, 1972-73

TABLES 4 through 18 show estimated average and median salaries and salary distributions for members of the instructional staff.

Table 4 shows a summary of mean salaries paid teachers and other members of the instructional staff both by enrollment grouping and by sex. The averages for both men and women for each enrollment group and for each position shown are based on weighted averages of total responses; the averages for salaries paid to men and women separately are based on those responses which gave salaries by sex. For almost every position shown, the average salary paid women is substantially less than that paid men. For example, the average salary paid all full-time public-school teachers in 1972-73 was estimated to be $10,254; the average for men teachers was estimated to be $10,654 and for women, $9,787.

Teachers

Table 5 shows mean, median, first and third quartiles, and salary distributions for all classroom teachers by enrollment groupings. Only 1.1 percent of all teachers were estimated to have received less than $6,000 in 1972-73. Only 0.2 percent of the teachers in systems with enrollments of 25,000 or more averaged less than $6,000. On the other hand, 11.3 percent of the teachers in districts with enrollments of less than 300 were paid less than $6,000.

A total of 45.6 percent of all teachers were estimated to have been paid $10,000 or more in 1972-73. This compares with 34.0 percent two years earlier, in 1970-71.

The mean salary of $11,215 paid teachers in 1972-73 by large systems with enrollments of 25,000 or more was 9.3 percent above the national average of $10,254, and 43.1 percent above the average of $7,835 paid teachers in the small systems (Group D).

In Table 6 the number of teachers by preparation level and the mean salaries are shown for each of the four major enrollment groupings and for all operating systems. The average salary for all teachers with less than a master's degree (or five years of college training) was $8,995; this compares with an average of $14,512 for teachers with six or more years of college.

Principals

Supervising principals—Salary distributions shown in Tables 7, 8, and 9 are based on estimated totals of 48,196 elementary-school supervising principals and teaching principals, 9,374 junior high-school principals, and 15,827 senior high-school principals, or a total of 73,397 supervising and teaching principals.

The mean salary in 1972-73 for all elementary-school supervising principals was estimated to be $15,908; for junior high-school principals, $17,024; and for senior high-school principals, $16,531. Since the largest districts and districts that pay high salaries usually are more likely than others to have junior high schools, it is not surprising that the nationwide average salary of junior high-school principals exceeds that of senior high-school principals.

The average salary of $20,800 for high-school principals in districts with enrollments of 25,000 or more is 95.1 percent higher than the average of $10,666 for districts with enrollments under 300 (Group D). Only 0.1 percent of senior high-school principals in the largest districts (Group A) received less than $10,000; 48.5 percent of those in Group D were being paid less than $10,000 in 1972-73.

Assistant principals—Estimated national average salaries for assistant principals for elementary-, junior, and senior high-school assistant principals are shown in Tables 10, 11, and 12.

The estimated mean salary for all elementary-school assistant principals in 1972-73 was $15,768; for junior high-school assistant principals, $15,802; and $16,177 for senior high-school assistant principals.

Other Professional Personnel on the Instructional Staff

Estimated national mean salaries were computed for each of the six positions shown in Tables 13 through 18. Medians, quartiles, and salary distributions by enrollment grouping are shown also.

These data concern nonteaching full-time professional personnel assigned to individual schools.

A summary of mean salaries for these positions is shown below for the six positions.

Salary data for central-office personnel were not obtained for the 1972-73 survey.

Table 19 summarizes average salaries paid selected instructional staff positions for six biennial periods from 1962-63 through 1972-73. Table 19-A shows the same data expressed as an index to the 1962-63 salaries for each position shown.

Tables 20 through 33 give system-by-system listings of salary data for teachers, principals, and other members of the instructional staff for reporting systems with enrollments of 25,000 or more, Group A, also included in the summary tables.

Position	Mean salaries, by enrollment grouping				
	Total—national estimate	A—25,000 or more	B—3,000-24,999	C—300-2,999	D—under 300
